I certify that the above named student is not disabled; however, he/she would benefit from modifications to the school meals as described above.

 Physician/Recognized Medical Authority Signature _____
 Phone Number

Medical Office Stamp

Accommodating Students with Special Dietary Needs

As a participant in the National School Breakfast, Lunch, and After School Snack Programs, the Chatham School Nutrition Program is required to make accommodations for students who are unable to eat school meals because of a physician diagnosed disability as defined in the Rehabilitation Act of 1973, the Individuals with Disabilities Education Act (IDEA), and the Americans with Disabilities Act (ADA). In order to make modifications and/or substitutions to the school meal, the Chatham School Nutrition Program must have a written diet prescription on file that is signed by a licensed physician or other licensed health care professional authorized to write medical prescriptions under Georgia State law. Students without disabilities, but have special dietary needs requiring food substitutions or modifications, can request a meal plan modification. The request for a meal plan modification for a non-disabled student is decided on a case-by-case basis and must be accompanied by a physician ordered diet prescription. The Chatham School Nutrition Program is not required to make modifications to meals based on food choices of a family or student. Currently, school meals are varied to allow for personal and/or religious preferences. The daily menu is constructed to offer a non-beef and a non-pork product every day.

Guidance for Completing *Diet Prescription*

Part A: Responsibility of Parent/Guardian

- ◆ Complete all items in Part A of the *Diet Prescription* form and take the *Diet Prescription* form to the student's physician for him/her to complete Part B.
- ◆ Provide a completed *Diet Prescription* form to the school nutrition manager.
- ◆ Maintain a healthy line of communication with all involved school staff by participating in any meetings and/or discussions regarding the student's modified meal plan.
- ◆ Present to the school nutrition manager a completed *Diet Prescription* form at the beginning of every school year to ensure that the diet prescription reflects the current dietary needs of the student. During the school year, if the physician order changes the student's dietary needs, a new diet prescription reflecting the diet changes must be provided to the school nutrition manager.
- ◆ Educate the student on food restrictions and teach the student to ask school nutrition staff to identify any food items that the student cannot identify.

Part B: Responsibility of Physician and Medical Authority

- ◆ Complete all items in Part B. A licensed physician's signature is required for students with a disability. For students without a disability, the signature of a licensed physician or a Georgia recognized medical authority (licensed physician, physician assistant, or nurse practitioner) is required.
- ◆ Detail the specific nature of the student's disability. Indicate if the student's condition is a food intolerance or a food allergy that would affect performance and/or participation at school or is a life-threatening condition.
- ◆ Provide specific instructions for what foods may be substituted for omitted foods. Note: Juice and water cannot be substituted for fluid milk as part of the reimbursable meal, and non-dairy milk is not available, even when physician requested.
